Career Synopsys and Objective

- I am a Data Analytics and GenAI Engineer with 2+ years of experience at EY building production-grade AI applications for many Global clients with a track record of driving measurable business outcomes.
- I am looking forward to an opportunity where I will get to leverage my skills learnt so far and solve real life customer problem statements.

Experience

Company and Role	Work Done	Business Outcome	Duration
Associate Consultant, EY India	For a global FMCG major I have: • Built multiple GPT and Azure AI-powered applications including a natural language Q&A system over shipment data • cybersecurity audit analyser for SaaS viability assessment. Also, I developed contract intelligence tool extracting key clauses and aggregating outputs into Power BI dashboards for real-time financial decision-making.	• Collectively saved 1,000+ hours of manual effort annually across cybersecurity, logistics and contract review functions. • The application achieved 85%+ accuracy across 172+ control definitions and handles 120+ annual reports, enabling faster and more reliable SaaS viability decisions.	July 2023- Present
	• Engineered an AI document extraction agent using GPT-4o and Azure Document Intelligence for a global cosmetics client, capturing 40+ critical attributes from MSDS and regulatory files	• Drove a 95% reduction in manual review time, enabling cross-functional teams across R&D, supply chain and compliance to access consistent, up-to-date ingredient and safety profiles significantly faster.	

	For a major Vehicle manufacturing company, Designed and developed an end-to-end AI-powered bot using Microsoft Copilot Studio and AI Builder that automates the analysis of business requirement documents. The bot processes multiple files simultaneously, extracts and structures Epics, User Stories, Tasks and Test Cases, and generates formatted JIRA tickets that are pushed to Azure DevOps enabling an LLM to autonomously scaffold project features.	Reduced manual Business Analyst effort by automating the end-to-end requirements-to-backlog pipeline, cutting down document analysis and JIRA ticket creation from hours to minutes and accelerating sprint planning and project initiation timelines.	
--	---	--	--

Intern, Bernoullium	Conducted platform analysis to identify and evaluate virtual world building platforms, gaining insights into industry dynamics and cost benefit analysis.	Helped business to determine which virtual world building offers the best features at an optimized cost.	December 2022- June 2023
	Researched and assessed VR gear for work meetings, developing expertise in processors, Wi-Fi protocols, and global availability to make informed decisions.	Helped business determine which VR gear is optimal for client meetings.	
	Created a comprehensive test plan for a network sizing tool, optimizing data flow and minimizing lag in virtual meetings using Wireshark and protocol analysis.	Helped to determine how the network tool can be optimized to deliver perfect picture resolution and voice in the virtual world without any lag.	
Intern, Netcon Technologies India Private Limited	Worked on an application that utilizes knowledge graphs to retrieve information from uploaded documents.	Developed a knowledge graph-based information retrieval application for extracting insights from uploaded documents.	January 2023- June 2023

Project Intern, Altimetrik	Created a secure system that stores and retrieves background details of a candidate using blockchain.	It will help the business store and retrieve candidate information in a safe and secure manner that can be accessed by registered users easily.	June 2022- August 2022
Intern, Cloudbyz	Worked on different modules in Trailhead for hands on training	Created process workflows and automation algorithms	June 2022 - August 2022
Intern, Kritikal Solutions	Created a liveness detection model using Python to verify the authenticity of real-time user images.	Helped the end user determine if the real time image of the user is real or not to prevent fraud.	June 2021- July 2021

Education

Institute	Course	Duration
IIM-Bangalore	FinTech Certificate Programme for Young Professionals	2025-2026
IIHT Bangalore	● Programming Languages: Python, Pyspark, C, SQL, ReactJS, HTML, CSS, C# ● Cloud: Azure, AWS ● Technical Skills: Machine Learning, Data Analytics, Data Science etc ● Developer Tools: Git, VS Code, PostgreSQL, Power BI	November 2023- February 2024
PES University Bangalore	B. Tech in Computer science and specialization in Machine Intelligence and Data Science.	August 2019- May 2023
Sri Chaitanya PU college	Physics, Chemistry, Mathematics, Informatics Practices	June 2017- May 2019

Projects

- **Document forgery detection using image processing:**
Developed a machine learning system leveraging Capsule Networks for signature forgery detection and ELA + CNN for copy-move forgery detection. Built custom datasets, applied preprocessing with OpenCV, and achieved strong results in distinguishing real vs. forged documents.

- **Placement analysis using R:**
Performed exploratory data analysis (EDA) and data visualization on student datasets to identify placement trends based on GPA, department, internships and other features. Also, I applied data preprocessing (handling duplicates and feature engineering) and developed predictive models using Decision Tree Classifier and regression techniques, tuning hyperparameters to improve stability. The model achieved 87% classification accuracy, generating actionable insights into how academic and demographic attributes influence placement outcomes.
- **MindArt:**
I developed a GenAI powered application using Gemini that analyses images and automatically generates optimized titles, descriptions and tags. The system leverages embeddings and prompt engineering to create consistent, SEO-friendly metadata tailored for artists, photographers and digital galleries.

Technical Skills

- **Languages:** Python, PySpark, C, R, SQL, ReactJS, HTML, CSS, C#
- **Cloud:** Azure, AWS, Azure DevOps
- **Developer Tools:** Git, Docker, VS Code, MongoDB, PostgreSQL, Linux Systems, NetBeans, Heroku, Data Bricks, Power BI, Yellow.ai, GitHub Copilot, Copilot Studio

Publications

- Document Forgery Detection, International Journal of Engineering and Advanced Technology, June 30, 2023

Activities/ Achievements

- Obtained the **ABBYY Business Analyst Certificate, 2023**
- Obtained a badge from Databricks for Generative AI Fundamentals.
- Obtained the following Badges from EY Learning:
 - Bronze Learning: EY Analytics - Data Visualization, EY Artificial Intelligence - AI Engineering, EY Artificial Intelligence - Applied AI, EY Data Strategy - Data Architecture, EY Analytics - Data Integration, EY Transformation- Change Management.
 - Silver Learning: EY - Artificial Intelligence - Applied AI
- Completed **Data science Specialization course in E&ICT IIT Roorkee**, India.
- Silver Medallist in state level karate championship, Black belt.
